Analysis

Sum of scope1 by Organisation name

Sum of scope2_percentage by Organisation name

Finding 1: Emissions Declining

Australia's top 20 corporations reduced Scope 1 emissions by 9 million tonnes between 2021-22 and 2023-24 — a 3% decline over three years.

Finding 2: Energy Sector Dominates

The Energy sector produces 65% of emissions from Australia's top 20 corporations. AGL Energy alone emits 32.9 million tonnes — more than all Mining companies combined.

Finding 3: The 80/20 Rule

Just 20 corporations — 5% of all reporters — produce 65.4% of Australia's Scope 1 emissions. Targeting these entities represents the highest impact opportunity for emissions reduction.

Finding 4: Renewable Energy Opportunity

Pechiney Consolidated (83% Scope 2) and QGC Upstream (71.4% Scope 2) could dramatically reduce emissions simply by switching to renewable electricity — no operational changes needed.
